

The following exhibits were given to Mr. D.O. BROWNING, Chemistry Division, US Army CI Lab, Fort Gordon, GA. The results of his analysis are summarized as follows. It should be noted in the interpretation of these results that

- a. The comparison samples of known hairs for Collette, ~~Kelton~~, and Kimberly MacDonald were obtained from their clothing
- b. An exhibit designation such as "D-210" in a column means that the listed exhibit is the same as Exhibit D-210, while a designation such as "-D-210" means that D-210 and the listed exhibit are different.
- c. This tabulation of data is only meant to be a handy summary of the report, not a substitute. For the exact interpretation of the laboratory analysis one should refer to the original report.
- d. For the sake of continuity of exhibit types, i.e. hairs, GLISSON'S comparison of hairs from K-4 and E-5 with E-305 thru E-313 is included in this tabulation.
- e. Blood results are included in this tabulation to show all the results for one exhibit in one place. These results were obtained by GLISSON, LAFER, FLINN, AND CHAMBERLAIN.
